

Here is a guide how to connect to remote desktop in Ubuntu. This guide is written for Remmina. Other applications will work as well.

Begin by opening "Remmina Remote Desktop Client." Select "New" from the "Connection" menu.
Remmina Remote Desktop Client

Fill in the information as shown in the photo below:

Remote De	sktop Preference	Ó
Profile		
Name	UMB	
Group		
Protocol	🚸 RDP - Remote Desktop Protocol	*
🗊 Basic 🌘	Advanced SSH	
Server	s-tshome.stud.umb.no	•
User name	username	
Password	zone1password	
Domain	STUD	
Resolution	O Use client resolution	
	○ Custom 640x480 ×]
Color depth	True color (32 bpp)	•
Share folde	r 🕑 👔 Documents	-
Default		

This picture applies to students.

For employee enter "a-desktop.ans.umb.no" for "Server" and "ANS" in "Domain.

It is optional to share a folder from your local machine with the remote desktop. "Document" is selected in this guide, but other folders can be chosen without any problems.

After having filled in the settings, select "Advanced". The quality of the connection may be selected. With good internet connection "Good" or "Best" may be selected, but with poorer connection "Medium" should be selected. Then press "Save".
